Abstract not available for JP 8506469 (T)

Abstract of corresponding document: **WO 9515646 (A1)**

The invention relates to a method for selecting programs in a digital video reception system. Said method comprises the following steps: reception of information corresponding to program identification elements; reception of information indicating the location of each program thus identified in the data streams broadcast by transmitters; display of said identification elements in the form of a mosaic of elements (10) on a display means (18) of said reception system; selection of one of the programs by selecting at least one identifier element. The invention applies particularly to television.
